Terminal

unix terminology

What is it?

The terminal is an interface in which you can type and execute text based commands

Why use it?

-It can be much faster to complete some tasks using a Terminal than with graphical applications and menus.

-Another benefit is allowing access to many more commands and scripts.

Commends

A common terminal task of installing an application can be achieved within a single command, compared to navigating through the Software Centre or Synaptic Manager.

$ sudo apt-get install deluge

$ sudo apt-get update
